INTRODUCTION

This is the seventh volume of the Tudor series (Part IV) of the edition of the London customs accounts (TNA: PRO E122). It is comprised of a single account, namely the petty customs controlment roll for 1506/07.

Everything the reader needs to understand about the English customs system – and the peculiarities of the customs administration in London – has been detailed in the introduction to the pilot edition.¹

Blessedly, the controlment roll is entirely straightforward: nothing needs to be explained to the reader in order to understand the account.

One small comment is, however, perhaps not misplaced. Anthony Velsar, an alien merchant who makes three appearances in the controlment roll (p. 9, 114, 133), is none other than the prominent Augsburg merchant Anton Welser I (1451-1518). This was unknown to the editors of the splendidly informative volume of essays on the Welser² and in particular, not to Peter Geffcken, author of the exhaustive survey article on the trade of the Welser.³

The customers' particulars of account were fiscal documents, forming an integral part of the procedure imposed on the customers when accounting for the crown's customs income before the Exchequer. As such, they were marked up by the auditor when he summed up the crown's income according to the various categories and tariffs. These marginated annotations form an integral part of the source and, in my view of it, deserve to be reproduced in full. I have done this in the following way. First of all, the auditor's summations of income at the end of each page or membrane (including the jottings reproducing the position of the counters on the counting table) have been reproduced as written in the account. Second, all other marginated notes (e.g. a cross or an asterisk indicating an error) are noted in the normal way in the critical apparatus. However, recording the eternally repetitive marginal notes on the tariff categories to which particular products belonged (*panni ind'*, *panni al'*, *panni Hans'*, *per breve* etc.) call for a different solution, since including them in the critical apparatus would simply blimp it up to no useful purpose. Consequently, I have indicated them in the text by employing superscript letters in angle brackets (e.g. ^{<a>}De Roberto Derlyngton) and

resolving these in a block at the bottom of the page (*Auditor's margined notations L: <sup>a> panni ind'*).

The problem of the hundredweight is exceedingly vexed. While it is well known that a hundredweight can correspond to 100 lb., 112 lb. or 120 lb. avoirdupois,⁴ there is no way to know which of these three values applies when a customer writes *c lb.* or fractions and multiples thereof. Just occasionally, when the particulars of account and the controlment roll have survived, some insight is possible, for instance if one of the two records a particular merchant's exports of pewter vessels as *di' c lb. vasorum stanni* and the other the same goods as *lvj lb. vasorum stanni*.⁵ But these cases are far too rare to inspire confident generalizing. Consequently, I have decided to leave the matter unsolved, marking the text in such a way that the reader can easily reconstruct the entry. The most common notation of weight – multiples of 'c' – has not been marked up. Thus *ijj^c lb.* is simply transcribed as 300 lb. If the thousand sign was used, the number is marked with a cross: thus, *ij M^l lb.* is transcribed as 2000[†] lb. (but *xx^c lb.* as 2000 lb.) If the sign for one half is used, this is indicated by an asterisk: thus, *di' c lb.* is transcribed as 50* lb. (but *l lb.* as 50 lb.) And finally, if the sign for one quarter is used, this is indicated by a double cross: thus, *c q' lb.* is transcribed as 125[‡] lb.

Diplomatic Notes on the Form of the Edition

The transcriptions of Latin documents in this edition observe the conventions of the *Monumenta Germaniae Historica*. The source texts (and all variants) are reproduced in normal type, while editorial intrusions are printed without exception in italics (e.g. *mardre L3, in error*). Unambiguous abbreviations are expanded silently, without using square brackets or italics to indicate missing letters. u/v and i/j have been regularized silently to accord with pronunciation: thus *vniuersalis* in the source text is rendered *universalis*, while 'i' is transcribed if the letter is pronounced as a vowel (*imperii*), and 'j' if the letter is pronounced as a consonant, i.e. like the 'y' in 'you' (*majestas*), even if the source writes *imperij* and *maiestas*.

Personal names and place names are transcribed exactly as written and only regularized in the Index of People and Places.

Roman numerals are reproduced as Arabic numerals, except for the sovereign's ordinal (*Edwardi ivth*). Arabic numerals which occur in the source texts are indicated by bold type. *ob'* is given as ½d, *q'* as ¼d and *ob' q'* as ¾d.

Following the convention in German, I have used a full stop after a number to indicate the ordinal rather than the cardinal, if a number is not written out. Thus, *27. die Januarii* (p. 147) is to be understood as *vicesimo septimo die Januarii*, rather than *viginti septem die Januarii*.

When transcribing the customs accounts, I have numbered the ships consecutively in italics in square brackets. The individual paragraphs of longer texts

⁴ OED s.v. hundredweight.

⁵ Therefore, when transcribing entries regarding the export of pewter vessels, I have retained the hundredweight (e.g. *pro 9 centenis vasorum stanni*).

have also been numbered in the same way. The reason for this is that the web version of the accounts and accounting materials for the Lancastrian period has no pagination, since the amount of text displayed on the screen depends on the size of the monitor and its resolution. Consequently, cross references – whether within a single document, from one document to another or in the indices – to 'page thus-and-such' are meaningless, and some internal sub-division of the text which can be linked in is unavoidable. Since some scholars will want to use the printed version of the edition and others the web edition, it is necessary to provide a common basis. Thus, if one scholar refers to ship No. 24 in the digital version of a particular account, those using the printed version will be able to find the vessel in question.

All dates and cross references in the source texts have been resolved in italics in square brackets in the text of the edition, rather than in footnotes.

If both the particulars of account and the controlment roll survive, certain variants have been suppressed to avoid inflating the text-critical apparatus. Thus, neither the substitution of 'y' in one text for 'i' in the other (e.g. Willyamson, Williamson) nor middle English plural variants (-es, -is, -ys etc.) have been noted in the apparatus criticus. In general, I have limited the notation of textual variants to those cases in which the variant spelling of a word changes the pronunciation. Thus, the variant *federbeds* will be noted against *fetherbeds*, but not *fedderbeds* or *federbeddes* against *federbeds*.

Punctuation is artificial and ignores all medieval full stops, commas and so forth. Since Latin is a syntactic language (like German), the eminently useful MGH convention – namely to employ punctuation (according to the pre-reform German rules) to mark up the grammatical structure of the sentence – has been employed here. I have also broken up the stylistically elegant, but utterly incomprehensible run-on Latin sentences of the source texts into manageable units.

Since we are dealing with late medieval administrative Latin, there are some cases which call for local by-laws.

First of all, there are a number of middle English words embedded in the Latin texts which have to be assigned a gender, since they are often modified by an abbreviated adjective (e.g. *pro 1 parv' fetherbed*). Since the adjectives are written out in a number of instances (*pro 1 parvo fetherbed*), I have arbitrarily imposed a masculine grammatical gender on all middle English words rather than litter the edition with apostrophes.

Second, the sources themselves are in a muddle as to whether the words *custuma* and *subsidium* are singular or plural, and usually avoid the problem by writing *cust'* and *subs'*. If a scribe does write out the one or the other word, it is almost inevitable that he will contradict himself, writing *custuma* in one line and *custume* a few lines later. This muddle is not merely the result of scribal carelessness or low standards of Latinity. In the fifteenth century, it was possible to differentiate between the collective noun (in the singular) denoting the charges to be paid and the individual sums (in the plural) which each merchant rendered. Even bearing this in mind, however, scribes are simply not consistent. Taking each individual text as a whole, I have done my best to reproduce what the scribe seemed to be thinking.

INDEX OF PEOPLE AND PLACES

In accordance with current usage, the first names of Englishmen and -women have been standardized to their current forms. Thus Willelmus in the accounts is indexed as William and so forth. Italian and Spanish first names are given in the 'ablative' (Andrea, Beaceo, Roderigo rather than Andreas, Beaceus, Roderigus). The first names of other foreigners, who are largely Dutch and German, are normally indexed in something approaching their modern forms, e.g. Johannes, Jacob, Herman, Hugo rather than Hugh (which would indicate an Englishman). However, it is not possible to be entirely consistent. Take, as an example, Willelmus. Is one to index Hanseatic merchants as Wilhelm, but Dutch merchants and shippers as Willem or Wim and the Dinanters as Guillaume? To do so would simply be to introduce incredible confusion, entirely leaving aside the intractable problem of distinguishing between merchants of Dutch and Hanseatic origin. Therefore, in a number of cases I have indexed Dutch and German merchants' first names in the current English form: e.g. Paul, William, Laurence, Andrew, Henry.

Family names have been grouped, where possible, in the index, with cross references leading the reader from the variants to the main entry, which records all variant spellings in parentheses. However, given the inconsistency of the customers' scribes, I have found it impossible to resolve all doubts and have therefore tried to steer a middle course between the splitters and the lumpers. There are cases where there can be no doubt that divergent spellings denote one and the same merchant. On the other hand, there are cases where I am all but certain that variant spellings denote one person, yet am troubled by nagging doubts. In these cases I record the names separately and referred back and forth ('see also N.N.').

The order of the family names in the index is phonological, so that, for instance, 'y' is alphabetized as 'i'.

Place names are in small capitals.

INDEX OF SUBJECTS

The index is structured so as to serve as a glossary. Hence, the main entry is under the word as it appears in the sources (*zinziber*), and a cross-reference leads the reader from the modern English term to the main entry (ginger see *zinziber*). If a term is in Middle English, the plural form is also given (e.g. *alle hafte*, -s); if in Latin, the genitive (e.g. *allec*, *ecis*). More than one reference per page is not noted.
