INTRODUCTION

This is the ninth volume of the Tudor series (Part IV) of the edition of the London customs accounts (TNA: PRO E122). It is comprised of 1) the tunnage and poundage particulars of account for part of the year 1509; 2) the wool customs and subsidy particulars of account for 1509/10; and 3) a puzzling list of the cockets issued to wool exporters taking part in the first convoy from London to Calais on 6 Mar. 1510 (and from Boston to Calais on 4 April 1510), thus reproducing the information contained in the particulars of account for 1509/10.

Everything the reader needs to understand about the English customs system – and the peculiarities of the customs administration in London – has been detailed in the introduction to the pilot edition.¹ However, there are some issues to be dealt with.

TUNNAGE AND POUNDAGE (1509)

The brief tunnage and poundage account, covering the period between the death of Henry VII on 22 Apr. 1509 and the following 24 June, is entirely straightforward. There are no licences and no writs to be dealt with.

WOOL CUSTOMS AND SUBSIDY (1509/10)

The wool customs and subsidy particulars of account are also straightforward. The staple company continued to retain the proceeds of the wool customs and subsidy (totalling £10,410 2s 9½d in this year) - which were actually paid over by the merchants on arrival in Calais - by authority of an act of the parliament of 25 Jan. 1504² and a royal mandate directed to the customers dated 12 Apr. 1504, which was not enrolled.

However, two groups of London merchants exported wool to the Mediterranean (*ad partes exterarum ultra strictus de Marrok*) on 7 Jan. 1510, paying no more than 4 marks (£2 13s 4d) per sack for customs, subsidy and Calais duties, as the account notes,³ by warrant of a patent letter and a royal mandate directed to the London wool customers. The auditor, pursuant to his duty to maximize the crown's income, charged the customers with the difference between this rate and the alien

rates⁴ which, by statute, should have been charged on wool exports destined elsewhere than Calais.⁵ Details are shown in Table 1 below.

Merchant	amount of wool	paid by the merchant	auditor's surcharge
John Alen	30 sacks, 13 cloves	£80 13s 4d	£36 6s
Thomas Seymer	97 sacks, 3 cloves	£258 16s 5½d	£116 9s 3¾d
Henry Eden	11½ sacks, 9 cloves	£31 2s 8½d	£14 1¾d
John Gerard	33½ sacks, 19 cloves	£90 6s 3d	£40 12s 9½d
Thomas Wattes	17 sacks, 19 cloves	£46 6s 3d	£20 16s 9½d

When the customers appeared before the full Exchequer for final accounting,⁶ they petitioned for exoneration for these surcharges. In the case of Alen, Seymer and Eden they referred the Exchequer to the king's patent of 17 Dec. 1509 (Appendix I 1) and the corresponding mandate to the Exchequer (Appendix I 2), proffering the king's mandate directed to themselves (Appendix I 3) and the indentures they had drawn up with each of the three merchants on 7 Jan. 1510, documenting their wool exports (Appendix I 4-6). In the case of Gerard and Wattes, they followed the same procedure, referring to the king's patent of 3 Jan. 1510 (Appendix II 1) and the corresponding mandate to the Exchequer (Appendix II 2) and proffering the king's mandate directed to the themselves (Appendix II 3) and the indentures they had drawn up with both merchants on 7 Jan. 1510, documenting their wool exports (Appendix II 4-5). In each case, the Exchequer granted the requested exoneration.

BOOK OF COCKETS (1510)

The real problem is the greatly puzzling list of the cockets issued to wool exporters taking part in the first convoy from London to Calais on 6 Mar. 1510 (and from Boston on 4 April 1510). Two questions need to be addressed: Who could have drawn up such a document? And what was its purpose? As we shall see, these are not easy questions to answer. It is best to start with what is unquestionably true (however banal that might be) and work out from there.

The document is written on paper. This fact alone suffices to prove that it was not submitted to the Exchequer - either by the customers themselves or by the controller - in an official capacity for accounting purposes, since all such documents were written on parchment.

The document is a clear copy, written in a neat hand throughout, with no additions, jottings or systematic mark ups. Moreover, it is not made up of separate gatherings which could have been sewn together at any time. As the quire structure (IX¹⁸) shows, all leaves were conjoined from the outset. The headings - *London*

⁴ These rates were: 10s/sack for customs, 66s 8d/sack for subsidy and Calais duties at 8d/sack, totalling £3 17s 4d.

cokett the 6th day of Marche anno Domini 1509 etc. (f. 2^r) and *Bostone cokett ibidem 4^{to} die Aprilis* (f. 11^r) - tell us nothing.⁷

The document cannot have been copied directly from the London particulars of account, since the order of ships differs violently, as Table 2 shows.

In addition, ship 4 in the particulars of account (Richard Cheyny, skipper, *Anna de Berkyng*) is missing in the book of cockets (nor is it to be found misplaced in the Boston portion of the booklet). Furthermore, the manner in which each scribe recorded the names of the individual ships and their skippers is different. In the particulars of account, the skipper's name comes first, followed by the name of the ship (*In navi* [skipper's name] *vocata* [ship name]), whereas in the book of cockets the order is reversed (*In navi vocata* [ship name], *unde* [skipper's name] *est magister*). Now, this was a matter of the most complete indifference to the Exchequer: Each scribe could follow his own predilections. The fact that the scribes who wrote out the book of cockets and the particulars of account chose a different way of recording this information is significant only in that it demonstrates that the book of cockets cannot have been mechanically copied from the particulars of account. Finally, the book of cockets contains no reference to crown income, however notional, as, for instance, as can be found in the particulars

⁷ Note that the *anno Domini* (1509) refers to the English ecclesiastical year, which did not end until 25 Mar.

of account, where *cust' et subs' nichil, quia per breve* is marginated and bracketed to all entries in a given ship.

However, this evidence is not quite as compelling as one might think. The particulars of account and the book of cockets are actually very closely related, although this does not become apparent until one (laboriously) compares the order of merchants in each ship in both documents. They are - in all but three instances - identical,⁸ and the three instances are very telling indeed. In two of the three cases, the scribe who wrote the book of cockets entered the woolfells exported by a pair of merchants immediately after their wool exports (see Table 3), whereas the scribe who wrote the particulars of accounts gathered all exports of woolfells together, bundling them at the end of the ship.

Table 3: Discrepancies between the book of cockets and the particulars of account	
Book of cockets (E122/79/18)	Particulars of account (E122/204/1)

Now, it should be emphasized that - as far as the Exchequer was concerned - it was completely immaterial whether a merchant's exports of woolfells were recorded immediately after his wool exports or gathered at the end of the entries for the whole ship. The scribes who wrote out the book of cockets and the

⁸ It is perhaps worth noting that the documents contain something on the order of 600 entries, so that the fact that there are only three discrepancies cannot be a matter of chance.

particulars of account were perfectly free to follow their own predilections. The fact that they had different notions of where to insert woollfell entries again provides incontrovertible evidence that the book of cockets cannot simply be a mechanical copy of the particulars.

The third discrepancy is even more telling. The scribe who wrote the book of cockets entered William Cooke's wool exports at the end of the ship, whereas the scribe who wrote the particulars of account entered them at the penultimate position, between those of John Nichille and Thomas More (see Table 4).

Book of cockets (E122/79/18)	Particulars of account (E122/204/1)
ship 37 John Nechill 4½ sacci, 11 ^a clavi 2 sarplers Thomas Mooris 1861 felles William Cooke 4½ sacci, 12 clavi 2 sarplers	ship 15 De Johanne Nichille, mercatore stapule, [pro] 2 saccis, 13 clavis; 2 saccis, 24 clavis. Summa 4½ sacci, 11 clavi lane in 2 serpleris De Willelmo Coke , mercatore stapule, [pro] 2 saccis, 14 clavis; 2 saccis, 24 clavis. Summa 4½ sacci, 12 clavi lane in 2 serpleris De Thoma More, mercatore stapule, [pro] 1861 pellibus lanutis

However, this discrepancy is more apparent than real, since the entry in the book of cockets was added subsequently in lighter ink. The scribe had obviously simply overlooked Cooke's exports and corrected his own mistake. A minor slip, to be sure, but a telling one. The key to unlocking its significance lies in the deceptively simple question of how such an error could come to pass. It is only conceivable if the immediate source of the entries in the book of cockets was one of the small slips of paper on which the customers initially recorded imports and, presumably, exports, as exemplified by the slip recording the imports of Lodewicus Thomasyn, measuring perhaps 25 × 2 cm.⁹

De carraca Lodewici Thomasyn — In batella de Bedelle

[De] dicto patrono, alienigena, [pro] 10 buttes et 4 barellis vini et 1 balett piperis [seal in red wax]

If the London wool customers used the same procedure in 1509/10, if, that is, they sorted the slips ship by ship - an easy task, considering that the name of the ship was centered at the top -, bundled (or sewed) them together ship by ship and stored all the bundles for each wool fleet (*eskipacio*) separately, say, in a bag or box, for later transcription in the particulars of account, then this would account for the fact that the book of cockets and the particulars record the merchants' names in each ship in all but identical order. It would furthermore account for the fact that the

order in which the ships are recorded in both documents differs so wildly. It would also account for the fact that ship No. 4 is missing the book of cockets: the scribe overlooked a bundle. And finally, it would account for the fact that the scribe who wrote the book of cockets initially overlooked William Coke's exports and had to add them subsequently: It is easy to imagine that the corresponding slip of paper had become detached from its bundle and was only found, in the end, at the bottom of the box (or bag).

This would seem to clear up the question of the source of the information contained in the book of cockets, but we need to consider a final discrepancy between it and the particulars, namely the manner in which the wool exports are recorded. Bowing to universal custom, the particulars of account record the size of each individual sarpler before totalling a merchant's exports in a given ship. Take the first entry in the particulars as an example, bearing in mind that the sigma-s (σ) is the customary abbreviation for *saccus*.

*De Ricardo Fermer, mercatore stapule, [pro] $\sigma\sigma$ di'; $\sigma\sigma$, 13; $\sigma\sigma$ di', 8; $\sigma\sigma$ di', 3.
Summa 9 sacc' di', 24 clavi lane in 4 serpleris*

Fermer exported a total of four sarplers of wool in this ship, the first weighing 2½ sacks (910 lb.), the second 2 sacks and 13 cloves (819 lb.), the third 2½ sacks and 8 cloves (966 lb.) and the fourth 2½ sacks and 3 cloves (931 lb.) for a total weight of 9½ sacks and 24 cloves (3626 lb.). By way of contrast, the book of cockets merely notes the total weight of the wool (in sacks and cloves) and the total number of sarplers, without giving any details.

Richard Fermer 9 sacc di' 24 cl' 4 sarplers

Now, this form of entries recording wool exports in the book of cockets is indubitably similar to that customarily used in controlment rolls.¹⁰ Compare the record of Peter Elys' ship in John Shirley's controlment roll for 1505/06¹¹ with the entries for the first ship in the cocket book of 1509/10.

De Johanne Morgan et Andrea Fuller, indigenis, [pro] 2244 pellibus lanutis

¹⁰ We should bear in mind that the controlment roll for 1509/10 has not survived, so that we cannot check this assumption against the evidence. A putative supervisor's roll cannot be assumed as a possible source for the cocket book, since there is no mention whatsoever of a supervisor in the enrolled account (TNA: PRO, E356/24 m 36d) or the final accounting (TNA: PRO, E368/284 Status et visus compotorum Hilary m 2).

Although the information the book of cockets conveys in recording individual merchants' exports of wool and woolfells is identical to that communicated in controlment rolls, the book of cockets differs violently in the way it records this information. To my knowledge, controlment rolls never use separate columns to record the names of the merchants, the amounts of wool they shipped and the number of packing units (sarplers, pokes etc.) in each case. By way of contrast, the cocket book employs three separate columns, connecting the entries for each individual merchant with lines drawn from column to column. This gives prominence to the sarplers' column, which is placed at the right-hand margin. We shall return to this observation.

The book of cockets also departs from universal practice in recording the names of merchants - with very few exceptions - in the vernacular: thus *Jacobus* in the particulars is recorded as *James* in the cocket book, *Johannes* as *John*, *Willelmus* as *William* and so forth, as Table 5 shows.

Moreover, the information that the merchant in question was an indigenous (staple) merchant, unfailingly supplied in the particulars of account, is lacking in the book of cockets. Finally, while the ship entries in the book of cockets are usually in Latin (*In navi vocata Antony de London, unde Johannes Jacob est magister*), there are a few exceptions (e.g. No 26: *In navi vocata Trenyte de Erythe, Thomas Wright master*). Such exceptions are not to be found in the controlment rolls.

In addition the book of cockets assumes an extraordinary familiarity with the membership of the staple company, since a large number of forenames were abbreviated (e.g. T. Allen for Thomas Allen), as Table 6 shows.

T. Allen (Thomas)	H. Kebylle (Harry)

J. Hille (not resolved)	J. Yarfford (James)
J. Hosier (John)	J. Yate (James)
M. Inglyshe (Mighelle)	
S. Jenyns kt. (Stephan)	

For anyone lacking the requisite knowledge, these abbreviations would have been horribly confusing. Even if a merchant's name is usually given in full initially and only abbreviated on succeeding folios, some disturbing ambiguities remained. For instance, J. can be John or James and H. Harry or Hugh. Worse yet, six of 52 abbreviated forenames were not resolved anywhere in the book of cockets. Whoever was to use it was presumed to know that 'T. Browne senior' and 'T. Crull' were both named Thomas, while 'H. Clopton' was named Hugh, but 'H. Eden' was named Harry and so forth. Anyone in the staple company would, of course, be in the picture, but no one on the outside would be able to resolve most of the abbreviations without immense effort, and even then some names would escape him.

It is time to return to the prominence given in the book of cockets to the column - carefully placed at the right-hand margin - detailing the number of sarplers in which each merchant's wool was packed. Given that the book of cockets, as seen above, would have been of very little use to anyone outside the staplers' company, it is worth exploring the possibility that this book was intended to be used by someone checking the sarplers as they were off-loaded in Calais. After all, we know that the company's merchants did not pay customs and subsidy on their wool exports until they got to Calais, where the staple company took the funds in hand, financed the defense and victualling of the Calais staple - a tiny English enclave surrounded on three sides by hostile France - and accounted for income and receipts before the Exchequer.¹² It would therefore have been in the interest of the staple company and all its members (not to mention the crown itself) to ensure that nobody was cheating. A neat little booklet containing all the wool declared upon lading to have been destined for the Calais staple might have been very useful indeed for checking to make sure that no one ducked out while underway, making a crafty detour to, say, Rotterdam in order to avoid payment of customs and subsidy and to dispose of his wool advantageously. Were this to be the case, then it would make sense to organize the lists by fleet (*eskippacio*) and export harbor, since that would be most likely to be the order in which they arrived in Calais.¹³ There is one tantalizing hint that this might, indeed, have been so. In the Boston section of the book of cockets, dots have been marginated against the merchants' names, as if someone had been checking that all merchants were present and accounted for. Unhappily, this was done only for the first ship, but not for any of the others, which rather vitiates the theory.

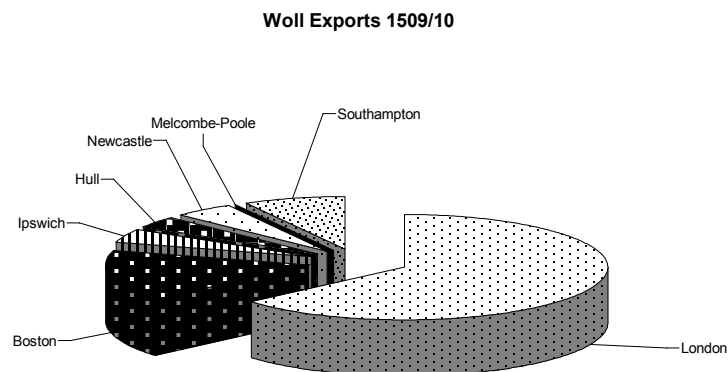

That is not the only problem. If the purpose of the book of cockets was to check that all of the wool allegedly destined for Calais actually arrived there, then it is inexplicable that it covers only exports from London and Boston. While the shipments from these two customs districts do constitute the lion's share - just

¹² Of the proceeds, the staple company was entitled to £10,022 4s 8d for the defense and victualling of Calais but had to pay £100 to the London wool customers and a further £666 13s 4d to the royal justices. Whatever was left over after that belonged to the crown.

¹³ After all, the fleet sailing from Boston on 4 Apr. simply had to arrive later than sailing from London on 6 Mar.

under 80% - of wool exports in 1509/10 (see Table 7 and Graph 1 below), there were not insubstantial exports from Ipswich, Hull, Newcastle, Melcombe-Poole and Southampton in that year too, totalling some 1740¼ sacks. Even if one were minded to disregard the exports from Southampton (since they were all alien and all destined for the Mediterranean), these exports still totalled some 1067¾ sacks, which would have yielded £2135 10s of customs and subsidy or 13.7% of total revenue. And yet the book of cockets makes no mention of the exports from Ipswich, Hull, Newcastle and Melcombe-Poole, although the scribe left f. 18^{rv} blank where he might easily have begun entering the exports from one of these customs districts, as he did with Boston, whose entries begin on f. 11^r, immediately following on the end of the entries for London on f. 10^v. The conclusion seems inescapable that the scribe simply had no information at his disposal regarding exports from Ipswich, Hull, Newcastle and Melcombe-Poole.

Graph 1: Wool exports from England, 1509/10

Even if we restrict ourselves to the period before 6 Apr. 1510, which was the cut-off date for the staple company's yearly account with the Exchequer, that doesn't change very much. Between 29 Sept. 1509 and 6 Apr. 1510, some 4756½ sacks of

wool (and woolfells) were exported from London, Boston, Ipswich, Hull and Newcastle to Calais, which would have corresponded to around £9477 11s in customs and subsidy. Of that, some 1327 sacks were exported via Ipswich, Hull and Newcastle to Calais. They would have yielded around £2654 of customs and subsidy, corresponding to 14% of the staple company's total income. An omission of this magnitude is difficult to conceive.

If we accept that the information contained in the book of cockets was generated within the customs administration, but was of no use to anyone outside of the staple company, there arises the question of how this information passed from the customs administration into the hands of the company. To answer this, we must turn to the indentures which were drawn up by the customers and the representatives of the staple company in order to document the exports of wool and woolfells in each fleet. The point to be noted is that these indentures and the cockets handed over to the individual merchants were both dated on the same day.¹⁴ Their contents may be illustrated by the first of two indentures from the London wool account for 1526/27 to have survived in the original. This indenture, dated 13 Mar. 1527, first states total exports (*eskippaverunt inter se in predicto portu London' dicto terciodecimo die Marcii 1913 saccos lane ac 89,551 pelles lanutas in forma sequenti in 37 navibus versus dictam stapulam Calesie et non alibi traducenda*), then details the total exports for each merchant and the corresponding charge for customs and subsidy (*videlicet Willelmus Denham 28 saccos, 22 clavos lane, quorum custuma et subsidium £56 16s 11¼d, ac 1300 pelles lanutas, quarum custuma et subsidium £10 16s 8d, Robertus Catlyn 46 saccos, 23 clavos lane, quorum custuma et subsidium £92 17s 8½d, ac 5638 pelles lanutas, quarum custuma et subsidium £46 19s 8d* and so forth) and finally states the total amount retained by the staple company (*quarum quidem lanarum et pellium lanutarum custume et subsidia attingunt in toto ad £4572 5s 10d, quos predicti major, constabularii et societas mercatorum stapule predictae virtute brevis predicti in manibus suis propriis retinent et habent*). What is important in our context is that each merchant's exports are totalled, irrespective of how many ships he freighted in order to transport his wool to Calais. Therefore, by the time the indenture was drawn up, the customers must already have sorted - merchant by merchant - the small slips of paper on which they recorded individual shipments of a given merchant in a given ship.¹⁵ This information was copied into the foreign

¹⁴ Compare, for instance, the dates of the two indentures from 1526/27 to have survived in the original with the dates given in the controlment roll for the fleets (TNA: PRO, E122/81/4). The first fleet left for Calais on 13 Mar 1527, and the corresponding indenture was drawn up on the same day. The second fleet departed for Calais on 10 Apr. 1527, and that is the date given in the corresponding indenture. The third indenture (27 July 1527) has gone astray.

¹⁵ The fact that merchants' exports were summed suggests that each merchant received one cocket covering all exports in a given fleet. One must, however, admit that we do not know much about cockets. Some evidence points to the practice of drawing up one cocket for each individual merchant's goods in a given ship (Robert L. Baker, *The English Customs Service, 1307-1343: A Study of Medieval Administration* (Transactions of the American

accounts (TNA: PRO, E364), which state - fleet by fleet - the total income retained by the staple company, the total exports effected by its members in a given fleet, the names of the merchants, the date of the cockets (recorded as the (notional) date of departure) and the names of the parties to the indenture (the customers and the representatives of the staple company).¹⁶

That is not the end of the information the indentures yield. Whenever the particulars of account survive in the period around 1500, a comparison of the order of the names in the particulars and in the indentures shows an exact match. The indentures begin with the first merchant in the particulars and work their way through systematically to the end. Take, for instance, the first ship in the fleet which sailed from London to Calais on 4 Nov. 1507.¹⁷

Table 8: Order of merchants in the particulars of account (1st ship, sailed 4 Nov. 1507) and in the corresponding indenture (drawn up on 4 Nov. 1507)

One could extend the table to cover the rest of the merchants in the first fleet and all other fleets which sailed from London to Calais in 1507/08, but the point is made: The indenture exactly tracks the particulars of account. Since the indenture was drawn up on 4 Nov. 1507, but the particulars of account only written up around the end of the year 1507/08, the conclusion is inescapable that the order of merchants' names in each ship and the order of the ships in the fleet was fixed on 4 Nov. 1507 and did not change thereafter, even when the clear copy of the

¹⁶ If the indentures have not survived (which is normally the case), we can consequently use the foreign accounts as a substitute. The only thing that is missing in the foreign accounts is the amount of wool and woollfells each merchant exported and the corresponding charge for customs and subsidy.

¹⁷ Stuart Jenks (ed.), *The London Customs Accounts. Part IV: The Tudor Dynasty (1485-1553), Number 8: 23 Henry VII (1507/08)*, Lübeck 2018, p. 1-18.

particulars was drawn up. Therefore, there must have been a (final) draft of the wool customs account for the first fleet (and for all subsequent fleets).¹⁸

Now, how does all of this relate to the book of cockets? How did the information it contains - so closely related to the particulars of account - get from the customers to the company? Maddeningly, the foreign account for Calais in 1509/10 - a crucial piece of evidence - seems not to have survived.¹⁹ We can, however, be certain that the London customers and the representatives of the company drew up four indentures, one for each of the four fleets exiting London on 6 Mar., 26 Mar., 16 Apr. and 20 June 1510. These were also the dates on which the cockets were issued to the individual merchants. The issuance of these documents on 6 Mar. 1510 (and correspondingly for the other fleets) occasioned a flurry of paperwork in the customs administration. The customers had to record each consignment of wool as it was weighed and placed in a lighter for transport to one of the 40 ships riding at anchor in the Thames estuary. These slips of paper then had to be sorted merchant by merchant for the entire fleet, so that totals could be calculated for the indenture and individual cockets produced. Then they had to be sorted ship by ship and sewn into bundles (one for each ship) in order to produce the indenture and the draft of the particulars. It is at this point, I think, that the information contained in the book of cockets passed to the representatives of the staple company, who, after all, had to be present when the indenture was drawn up. The information contained in the book of cockets can, in my view, only have been derived directly from the customers' bundles of slips documenting the exports in a given ship. If the source of the information was the individual slips, then the all but identical order of merchants in each ship in both documents would be inexplicable. If the source of the information was the draft of the particulars, then the discrepancies in the order of ships in both documents would be inexplicable.

However, we have not altogether explained the contents of the book of cockets. Whoever drew it up had to have information from two customs districts lying far apart from one another at his disposal. This can only have happened in Calais itself. After all, no customs official was active both in the Boston and the London customs administration in this year.²⁰ Nor does there seem to have been any pattern of overlap in the representation of the staple company in both ports. Reviewing the company's 'attorneys' (all of whom were merchants belonging to the company) for the years surrounding 1509/10 reveals no evidence of anyone who acted for the company in both ports. Therefore, we have to assume that the information

¹⁸ One must admit that - in view of the fact that the particulars of account number the ships in each fleet (in Arabic numerals!) - it is conceivable that the bundles were also numbered and only transcribed (in their correct order) onto the fair copy of the particulars of account at the end of the accounting period. However, I find this very unlikely, considering the discrepancies in numbering between the book of cockets and the particulars.

¹⁹ The foreign accounts leap from 24 Hen. VII (1508/09: TNA: PRO, E364/119/63-66) to 2 Hen. VIII (1510/11: TNA: PRO, E364/120/3-5).

²⁰ Stuart Jenks (ed), *The Enrolled Customs Accounts (PRO, E356, E372, E364) 1279/80-1508/09 (1523/24) Volume 12: E356/24, E356/30* (List and Index Society 348), London 2013, No. 43 (Boston) and 151 (London).

contained in the Boston section of the book of cockets was generated in that customs district and sent off to Calais independently. Once both communications arrived in Calais - most probably sent along with the fleet in question itself -, it is simple enough to imagine that a clear copy would then have been produced in a booklet under the auspices of the company in Calais.

Now, I would be the first to admit that this reconstruction represents, at best, an educated guess as to what might have happened. Not only does it involve too many suppositions to inspire overwhelming confidence, it leaves completely untouched the problem of how the book of cockets found its way from Calais into the Exchequer. Normally, the Exchequer had no interest whatsoever in inspecting any private documents belonging to the customers, much less in sequestering them. An exception obtained - as may be exemplified by the trial of the collectors of petty customs in London for peculation in 1423²¹ - in cases of malfeasance, which prompted the Exchequer to seize all relevant documents, even if they were in private hands. However, there is no indication whatsoever of any suspicion of malfeasance against the customs officials responsible for the London wool account for 1509/10.

Even if we cannot be certain about who drew up the book of cockets and what it represents, the very fact of its existence and the precious evidence it provides of the vernacular form of forenames we otherwise see only in formal Latin, more than justify its publication here.

The customers' particulars of account were fiscal documents, forming an integral part of the procedure imposed on the customers when accounting for the crown's customs income before the Exchequer. As such, they were marked up by the auditor when he summed up the crown's income according to the various categories and tariffs. These marginated annotations form an integral part of the source and, in my view of it, deserve to be reproduced in full. I have done this in the following way. First of all, the auditor's summations of income at the end of each page or membrane (including the jottings reproducing the position of the counters on the counting table) have been reproduced as written in the account. Second, all other marginated notes (e.g. a cross or an asterisk indicating an error) are noted in the normal way in the critical apparatus. However, recording the eternally repetitive marginal notes on the tariff categories to which particular products belonged (*panni ind'*, *panni al'*, *panni Hans'*, *per breve* etc.) call for a different solution, since including them in the critical apparatus would simply blimp it up to no useful purpose. Consequently, I have indicated them in the text by employing superscript letters in angle brackets (e.g. ^{<a>}De Roberto Derlyngton) and resolving these in a block at the bottom of the page (*Auditor's marginated notations L: ^{<a>}panni ind'*).

²¹Stuart Jenks (ed.), *The London Customs Accounts, Part II: The Dynasty of Lancaster (1400-1461), Number 2: 13 Henry IV (1412) – 5 Henry VI (1426/27)*, Lübeck 2016, p. xii-xiv. Transcript of the trial in the web version of the petty customs account for 1 Hen. VI, A3, A4, A5.

The problem of the hundredweight is exceedingly vexed. While it is well known that a hundredweight can correspond to 100 lb., 112 lb. or 120 lb. avoirdupois,²² there is no way to know which of these three values applies when a customer writes *c lb.* or fractions and multiples thereof. Just occasionally, when the particulars of account and the controlment roll have survived, some insight is possible, for instance if one of the two records a particular merchant's exports of pewter vessels as *di³ c lb. vasorum stanni* and the other the same goods as *lvj lb. vasorum stanni*.²³ But these cases are far too rare to inspire confident generalizing. Consequently, I have decided to leave the matter unsolved, marking the text in such a way that the reader can easily reconstruct the entry. The most common notation of weight – multiples of 'c' – has not been marked up. Thus *ijj^c lb.* is simply transcribed as 300 lb. If the thousand sign was used, the number is marked with a cross: thus, *ij M^l lb.* is transcribed as 2000[†] lb. (but *xx^c lb.* as 2000 lb.) If the sign for one half is used, this is indicated by an asterisk: thus, *di' c lb.* is transcribed as 50* lb. (but *l lb.* as 50 lb.) And finally, if the sign for one quarter is used, this is indicated by a double cross: thus, *c q' lb.* is transcribed as 125[‡] lb.

Diplomatic Notes on the Form of the Edition

The transcriptions of Latin documents in this edition observe the conventions of the *Monumenta Germaniae Historica*. The source texts (and all variants) are reproduced in normal type, while editorial intrusions are printed without exception in italics (e.g. *mardre L3, in error*). Unambiguous abbreviations are expanded silently, without using square brackets or italics to indicate missing letters. *u/v* and *i/j* have been regularized silently to accord with pronunciation: thus *vniuersalis* in the source text is rendered *universalis*, while 'i' is transcribed if the letter is pronounced as a vowel (*imperii*), and 'j' if the letter is pronounced as a consonant, i.e. like the 'y' in 'you' (*majestas*), even if the source writes *imperij* and *maiestas*.

Personal names and place names are transcribed exactly as written and only regularized in the Index of People and Places.

Roman numerals are reproduced as Arabic numerals, except for the sovereign's ordinal (*Edwardi ivth*). Arabic numerals which occur in the source texts are indicated by bold type. *ob'* is given as ½d, *q'* as ¼d and *ob' q'* as ¾d.

Following the convention in German, I have used a full stop after a number to indicate the ordinal rather than the cardinal, if a number is not written out. Thus, *27. die Januarii* (p. 147) is to be understood as *vicesimo septimo die Januarii*, rather than *viginti septem die Januarii*.

When transcribing the customs accounts, I have numbered the ships consecutively in italics in square brackets. The individual paragraphs of longer texts have also been numbered in the same way. The reason for this is that the web version of the accounts and accounting materials for the Lancastrian period has no

²² OED s.v. hundredweight.

²³ Therefore, when transcribing entries regarding the export of pewter vessels, I have retained the hundredweight (e.g. *pro 9 centenis vasorum stanni*).

pagination, since the amount of text displayed on the screen depends on the size of the monitor and its resolution. Consequently, cross references – whether within a single document, from one document to another or in the indices – to 'page thus-and-such' are meaningless, and some internal sub-division of the text which can be linked in is unavoidable. Since some scholars will want to use the printed version of the edition and others the web edition, it is necessary to provide a common basis. Thus, if one scholar refers to ship No. 24 in the digital version of a particular account, those using the printed version will be able to find the vessel in question.

All dates and cross references in the source texts have been resolved in italics in square brackets in the text of the edition, rather than in footnotes.

If both the particulars of account and the controlment roll survive, certain variants have been suppressed to avoid inflating the text-critical apparatus. Thus, neither the substitution of 'y' in one text for 'i' in the other (e.g. Willyamson, Williamson) nor middle English plural variants (-es, -is, -ys etc.) have been noted in the apparatus criticus. In general, I have limited the notation of textual variants to those cases in which the variant spelling of a word changes the pronunciation. Thus, the variant *federbeds* will be noted against *fetherbeds*, but not *fedderbeds* or *federbeddes* against *federbeds*.

Punctuation is artificial and ignores all medieval full stops, commas and so forth. Since Latin is a syntactic language (like German), the eminently useful MGH convention – namely to employ punctuation (according to the pre-reform German rules) to mark up the grammatical structure of the sentence – has been employed here. I have also broken up the stylistically elegant, but utterly incomprehensible run-on Latin sentences of the source texts into manageable units.

Since we are dealing with late medieval administrative Latin, there are some cases which call for local by-laws.

First of all, there are a number of middle English words embedded in the Latin texts which have to be assigned a gender, since they are often modified by an abbreviated adjective (e.g. *pro 1 parv' fetherbed*). Since the adjectives are written out in a number of instances (*pro 1 parvo fetherbed*), I have arbitrarily imposed a masculine grammatical gender on all middle English words rather than litter the edition with apostrophes.

Second, the sources themselves are in a muddle as to whether the words *custuma* and *subsidiium* are singular or plural, and usually avoid the problem by writing *cust'* and *subs'*. If a scribe does write out the one or the other word, it is almost inevitable that he will contradict himself, writing *custuma* in one line and *custume* a few lines later. This muddle is not merely the result of scribal carelessness or low standards of Latinity. In the fifteenth century, it was possible to differentiate between the collective noun (in the singular) denoting the charges to be paid and the individual sums (in the plural) which each merchant rendered. Even bearing this in mind, however, scribes are simply not consistent. Taking each individual text as a whole, I have done my best to reproduce what the scribe seemed to be thinking.

TUNNAGE AND POUNDAGE
PARTICULARS OF ACCOUNT
AND CONTROLMENT ROLL
21 APR. – 24 JUNE 1509

Particulars of account of Ralph Bukberd and Nicholas Warryng for the issues of tunnage and poundage in London during the period from 21 Apr. to 24 June 1509 together with the controlment roll of John Heron for the same period

L1 TNA: PRO, E122/81/1. Original particulars of account bound in Exchequer style (6 membranes, contemporaneous numbering of the membranes: imports (m 1-3) and exports (m 4-6) were sewn together separately with parchment tags and subsequently sewn together. Hence, the import and export membranes were initially numbered separately: 1 al' (m 1, upper left-hand corner); 2 al' (m 2, upper left-hand corner); 3 al' (m 3, upper left-hand corner); 1 (m 4, top of the membrane centre); 2 (m 5, top of the membrane centre); 3 (m 6, upper left-hand corner). When the two halves of the account were sewn together, the membranes were then numbered from 1 (m 1) to 6 (m 6) at the bottom centre of the recto side of the membrane). Parchment. Unsealed. The auditor has entered a dot (a) above each merchant's subsidy charge and (b) above each item of the crown's subsidy income in the summation of m 6d.

L2 TNA: PRO, E122/81/2. Original controlment roll bound in Exchequer style (5 membranes; contemporaneous numbering of membranes in Roman numerals at the bottom centre of the recto side of the membrane; in addition, the second import membrane (m 2) is designated 2 in the upper left-hand corner and the second export membrane (m 4) is designated 2 b in the upper left-hand corner, both designations being hidden in the stitching). Parchment. Unsealed.

INDEX OF PEOPLE AND PLACES

In accordance with current usage, the first names of Englishmen and -women have been standardized to their current forms. Thus Willelmus in the accounts is indexed as William and so forth. Italian and Spanish first names are given in the 'ablative' (Andrea, Beaceo, Roderigo rather than Andreas, Beaceus, Roderigus). The first names of other foreigners, who are largely Dutch and German, are normally indexed in something approaching their modern forms, e.g. Johannes, Jacob, Herman, Hugo rather than Hugh (which would indicate an Englishman). However, it is not possible to be entirely consistent. Take, as an example, Willelmus. Is one to index Hanseatic merchants as Wilhelm, but Dutch merchants and shippers as Willem or Wim and the Dinanters as Guillaume? To do so would simply be to introduce incredible confusion, entirely leaving aside the intractable problem of distinguishing between merchants of Dutch and Hanseatic origin. Therefore, in a number of cases I have indexed Dutch and German merchants' first names in the current English form: e.g. Paul, William, Laurence, Andrew, Henry.

Family names have been grouped, where possible, in the index, with cross references leading the reader from the variants to the main entry, which records all variant spellings in parentheses. However, given the inconsistency of the customers' scribes, I have found it impossible to resolve all doubts and have therefore tried to steer a middle course between the splitters and the lumpers. There are cases where there can be no doubt that divergent spellings denote one and the same merchant. On the other hand, there are cases where I am all but certain that variant spellings denote one person, yet am troubled by nagging doubts. In these cases I record the names separately and referred back and forth ('see also N.N.').

The order of the family names in the index is phonological, so that, for instance, 'y' is alphabetized as 'i'.

Place names are in small capitals.

As noted in the introduction, the book of cockets (III) merely repeats information contained in the particulars of account (II). In order to signal this, all page references from the book of cockets are underlined.

INDEX OF SUBJECTS

The index is structured so as to serve as a glossary. Hence, the main entry is under the word as it appears in the sources (*zinziber*), and a cross-reference leads the reader from the modern English term to the main entry (ginger see *zinziber*). If a term is in Middle English, the plural form is also given (e.g. *alle hafte*, -s); if in Latin, the genitive (e.g. *allec*, *ecis*). More than one reference per page is not noted. The index does not include the products from account III (E122/79/18), since that source merely reproduces (with one omission) the information in account II (E122/204/1), pp. 40-79.
